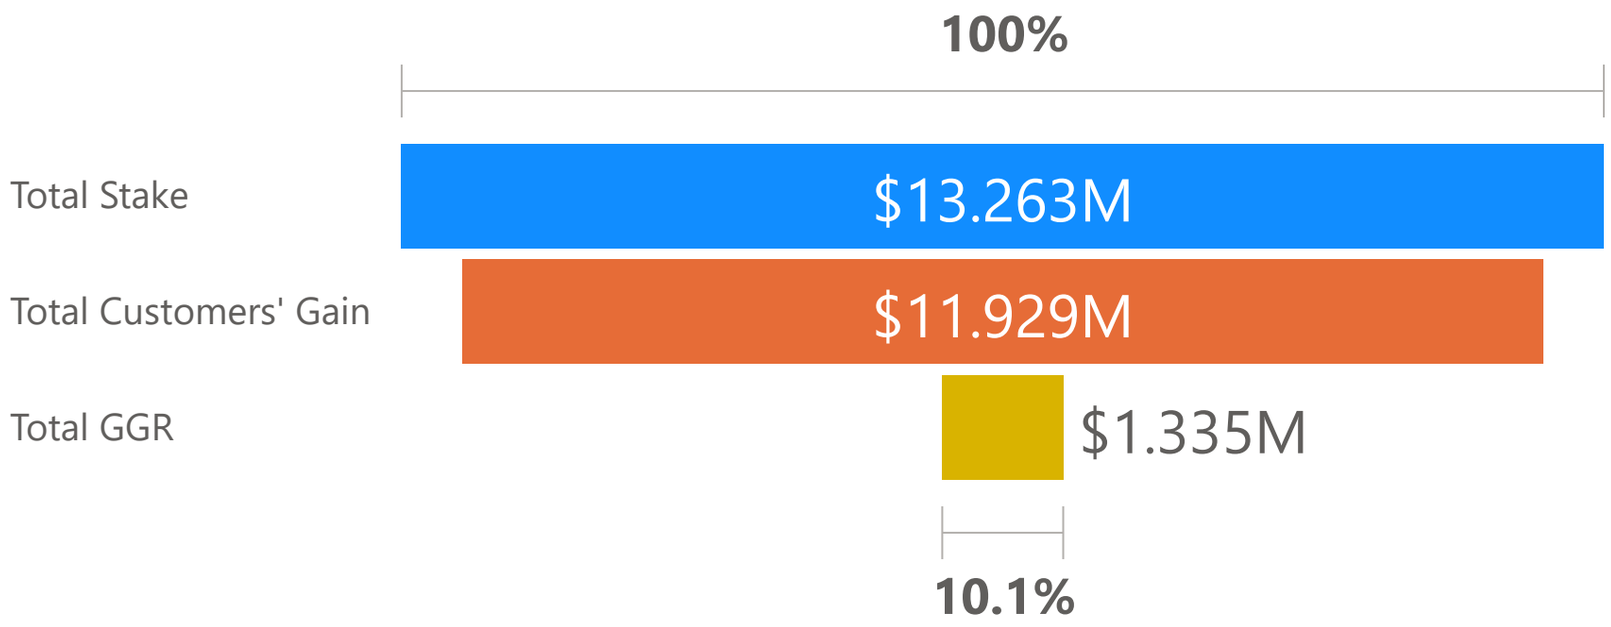
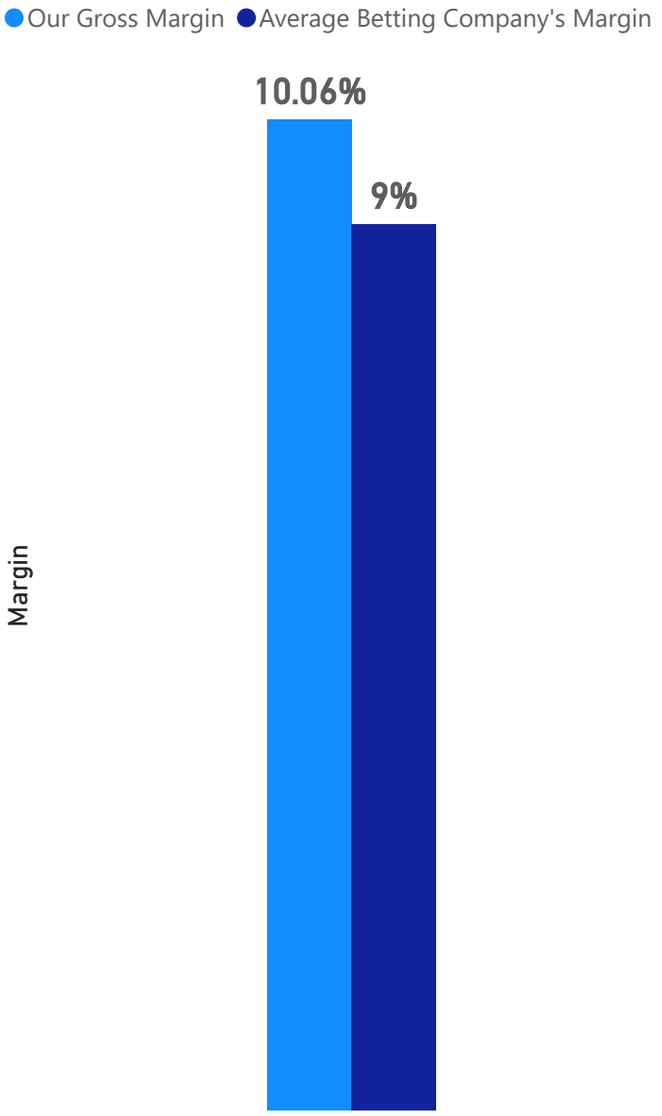
Margin and Sportsbook Efficiency Insights

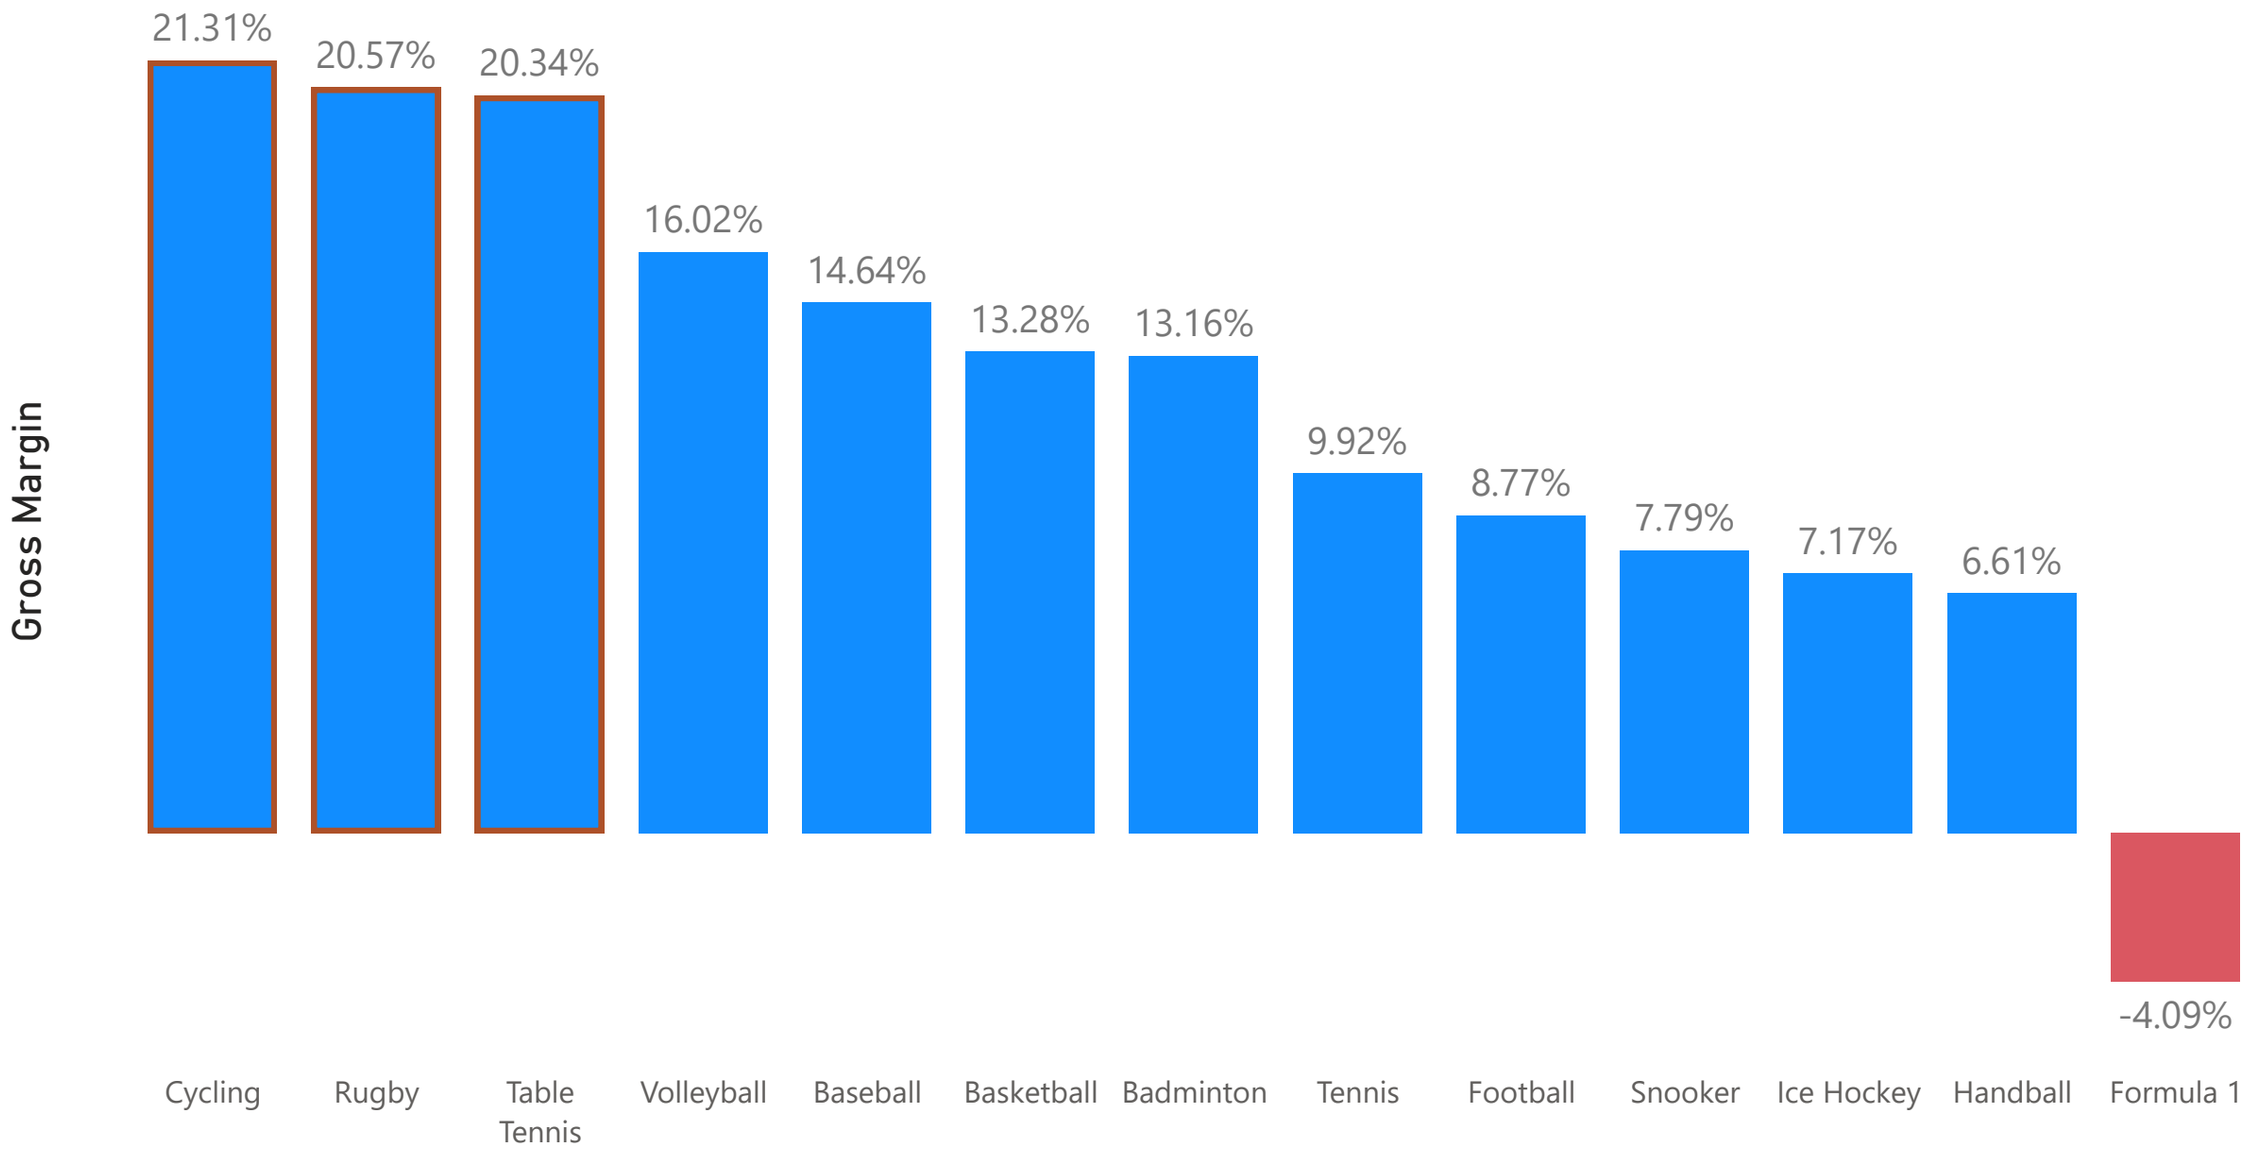
What process has lead to our Gross Margin ?



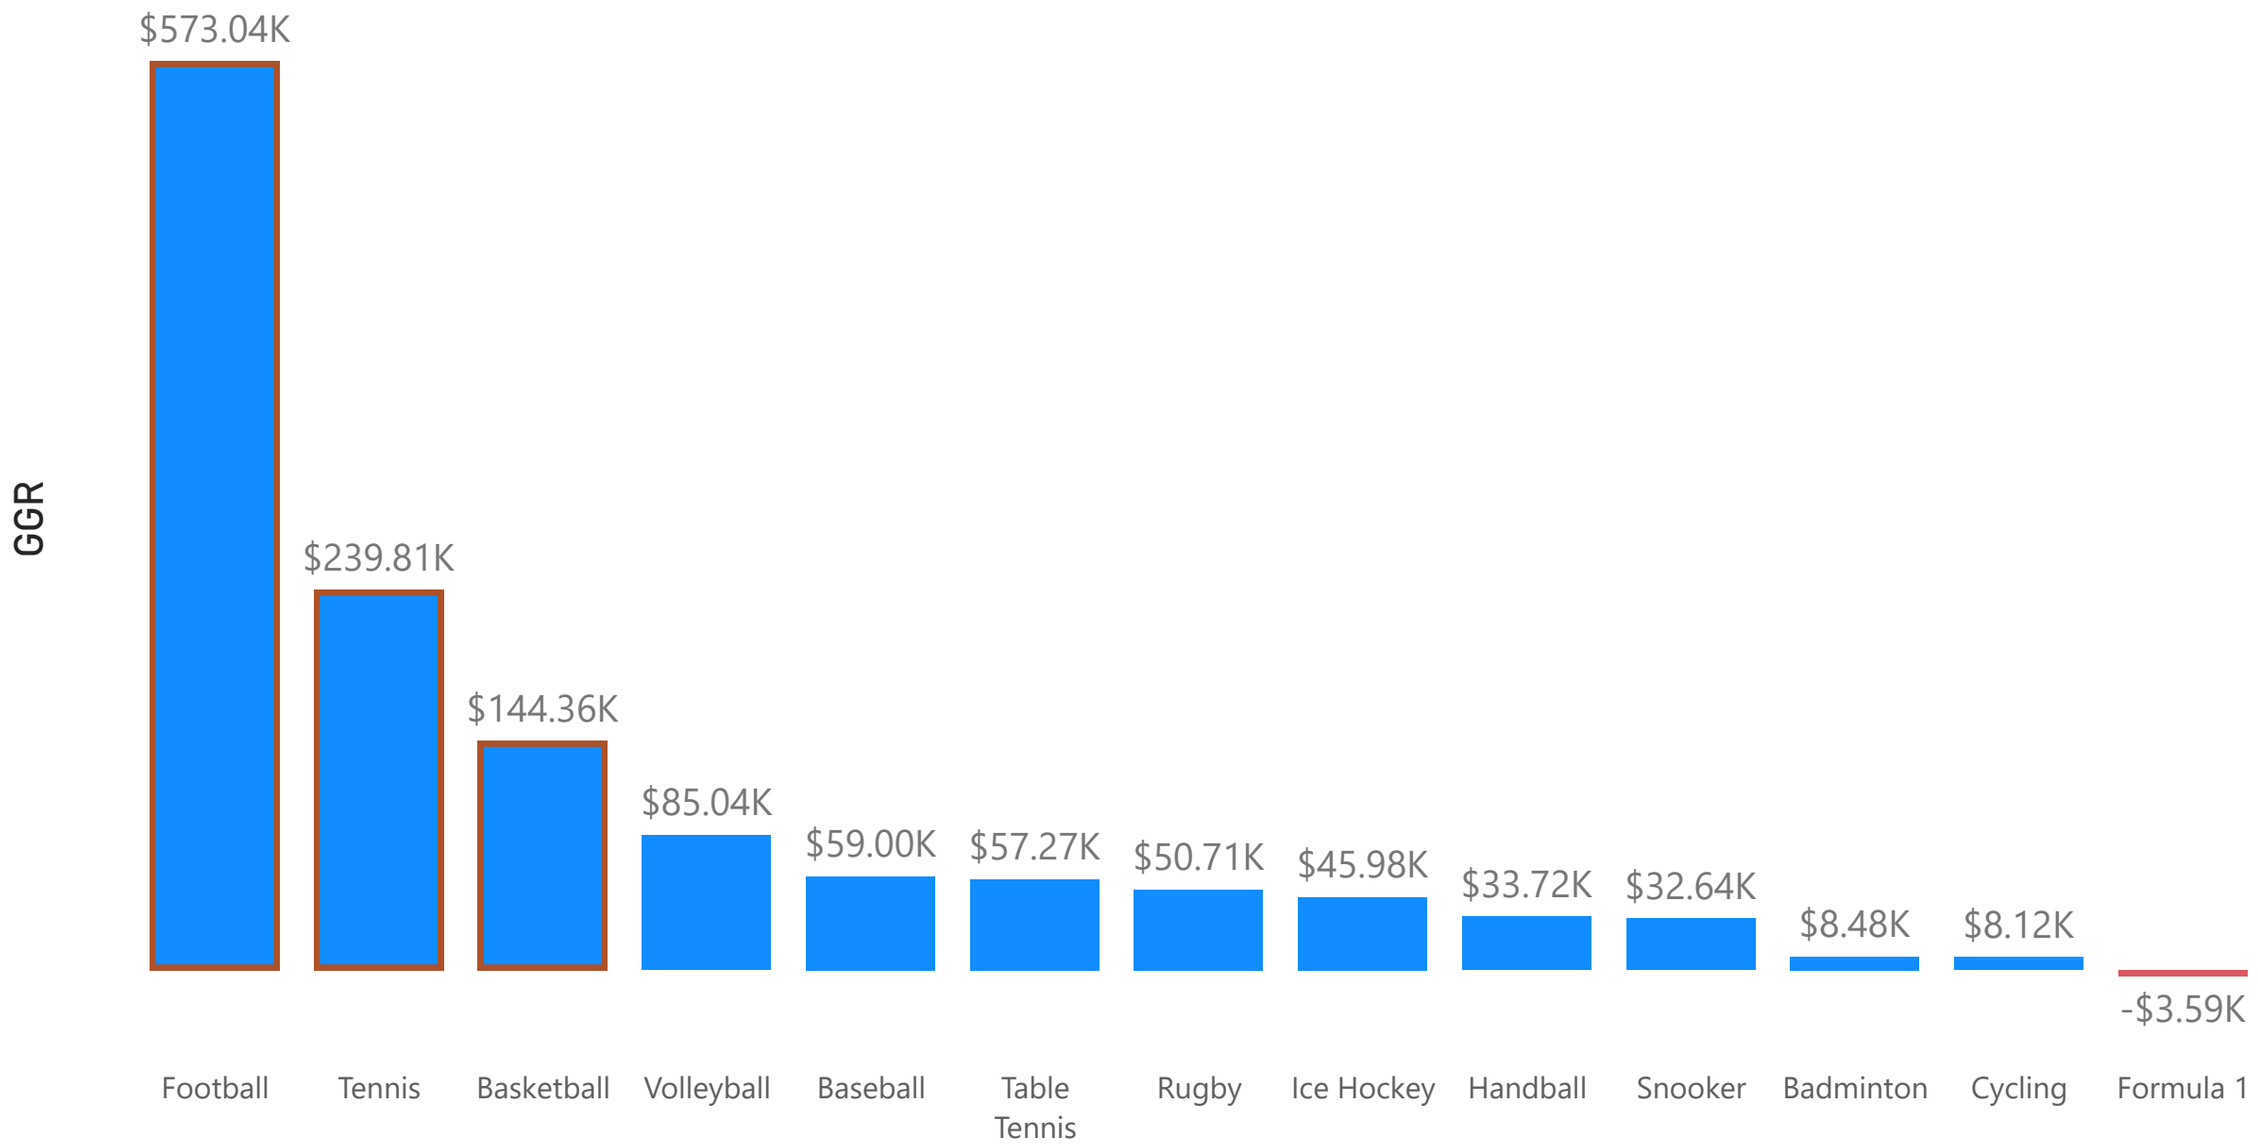
This year's Gross Margin is slightly Above Average



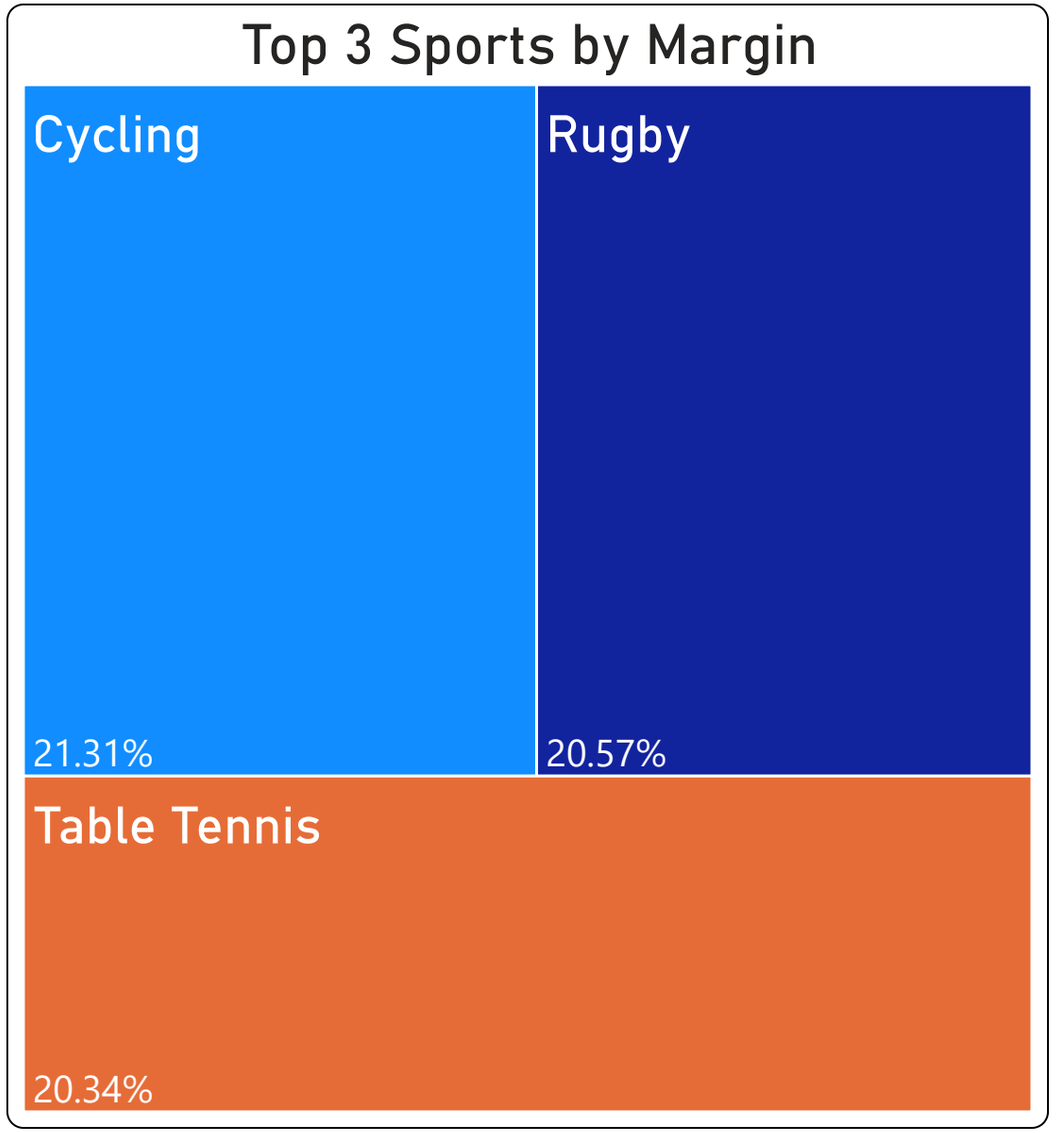
Which sports have we made the highest Gross Margin on?

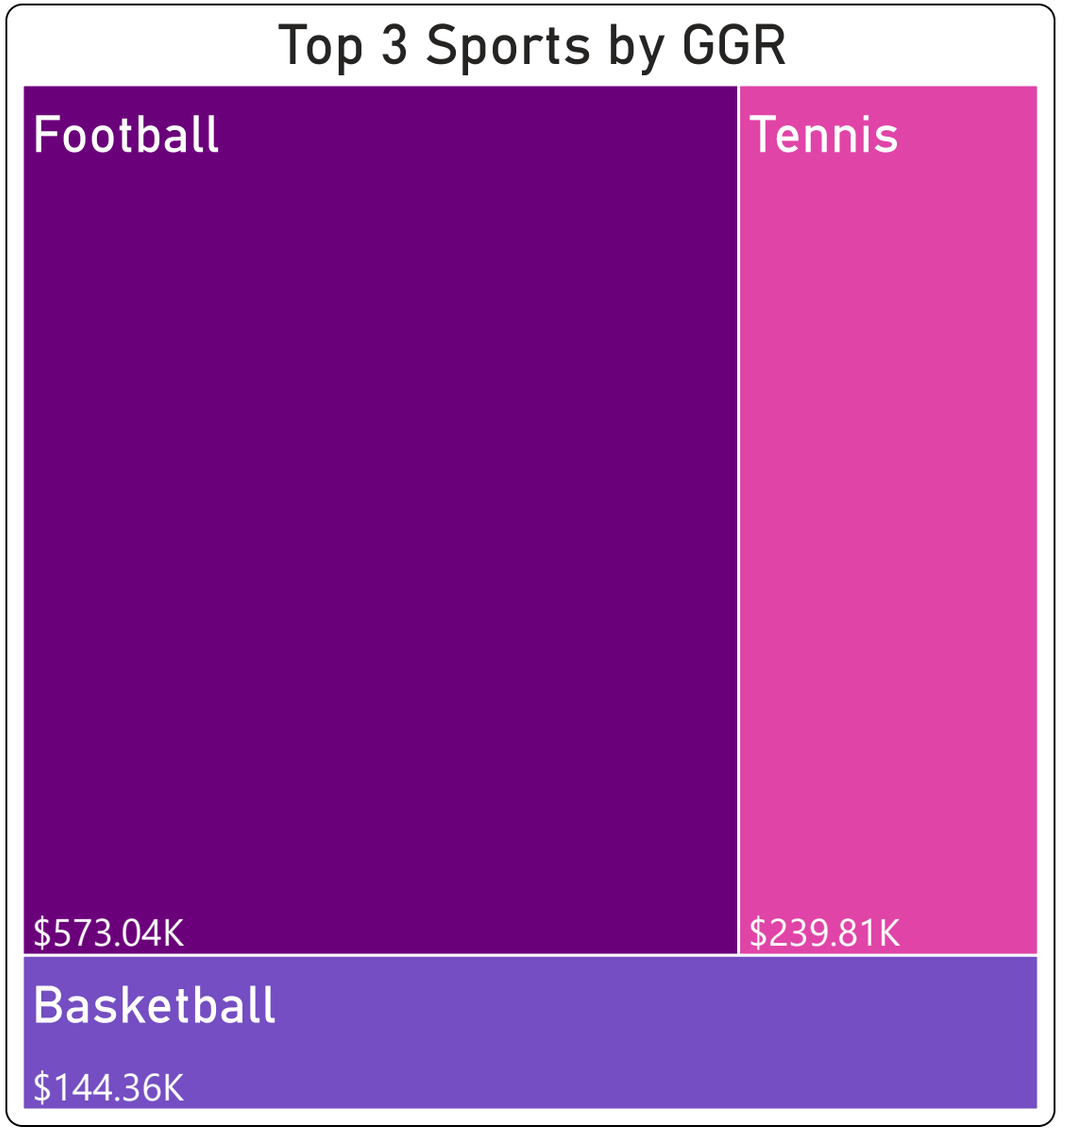


Which sports have been more profitable?

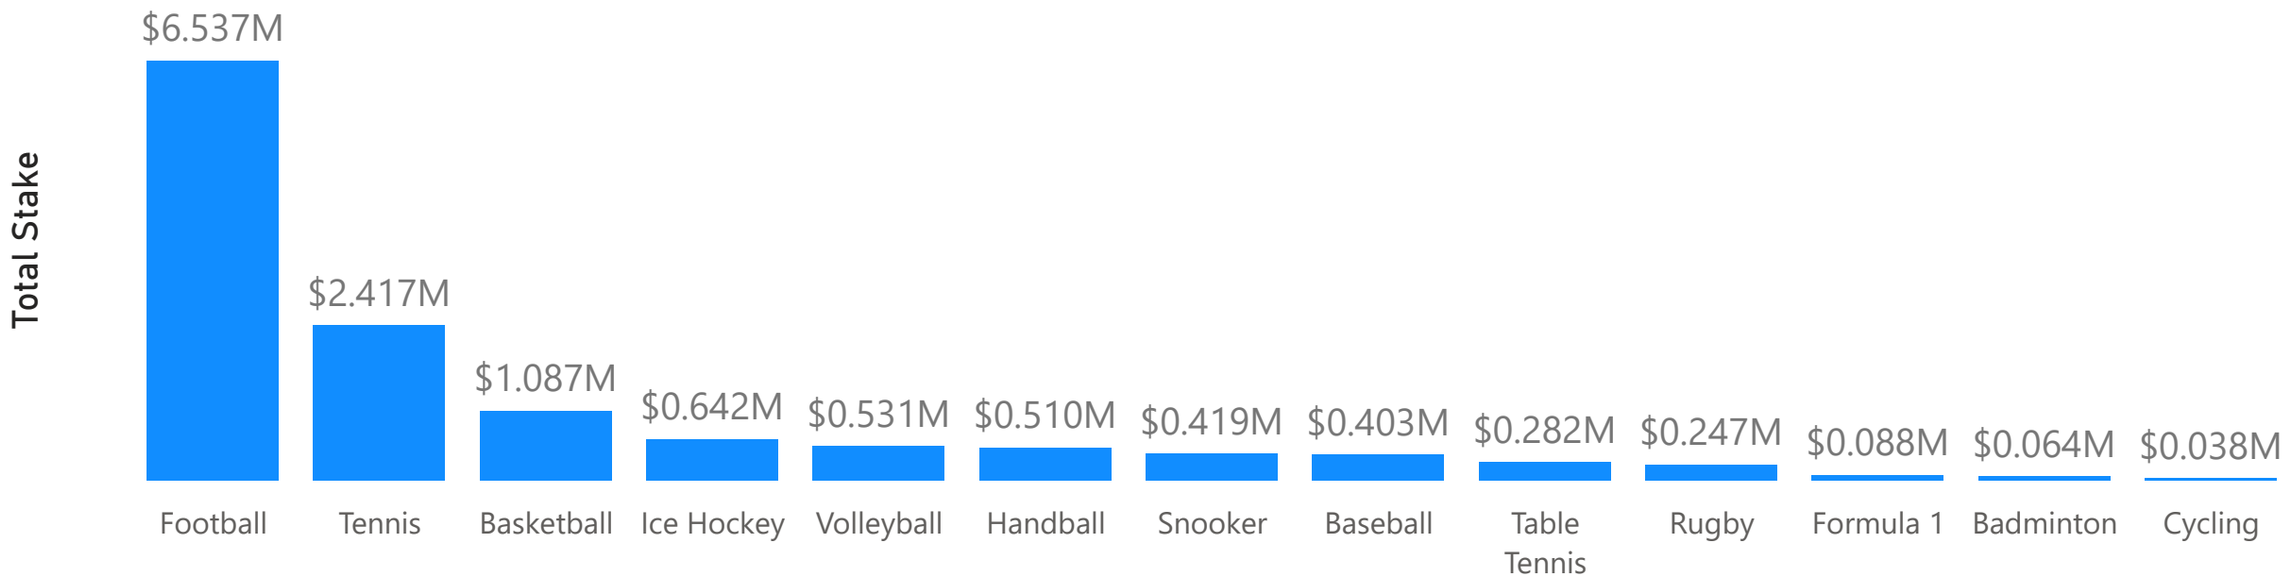


Sports with the highest margin are not the most profitable ones

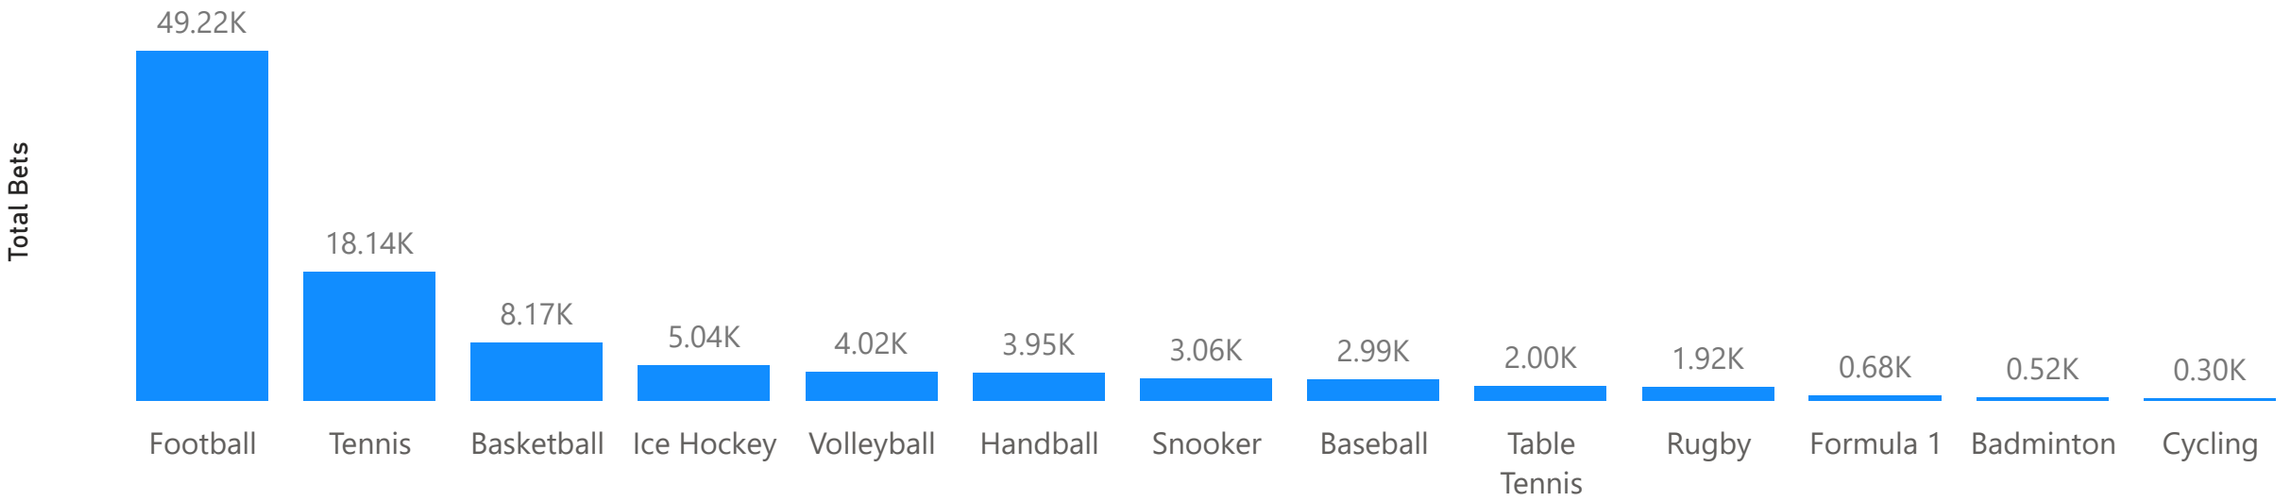




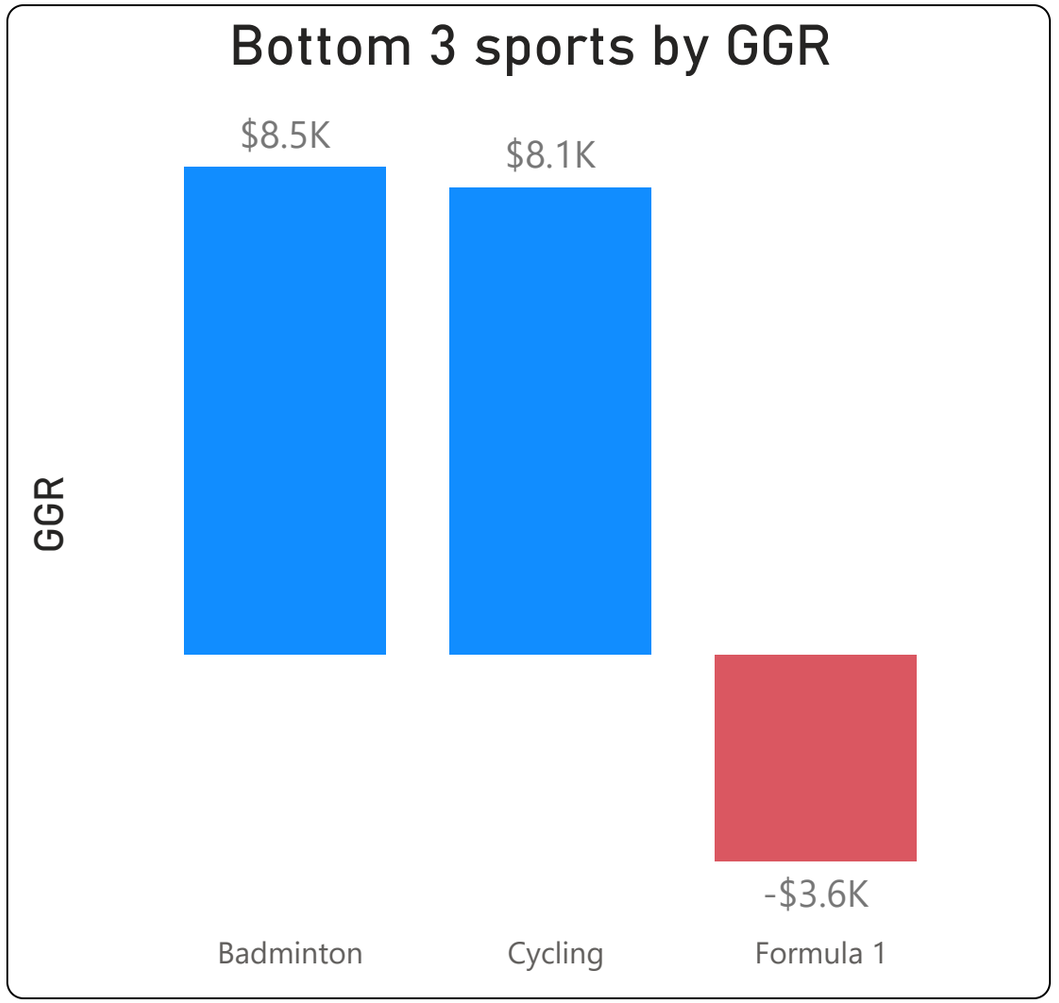
Which sports do our users bet more money on?

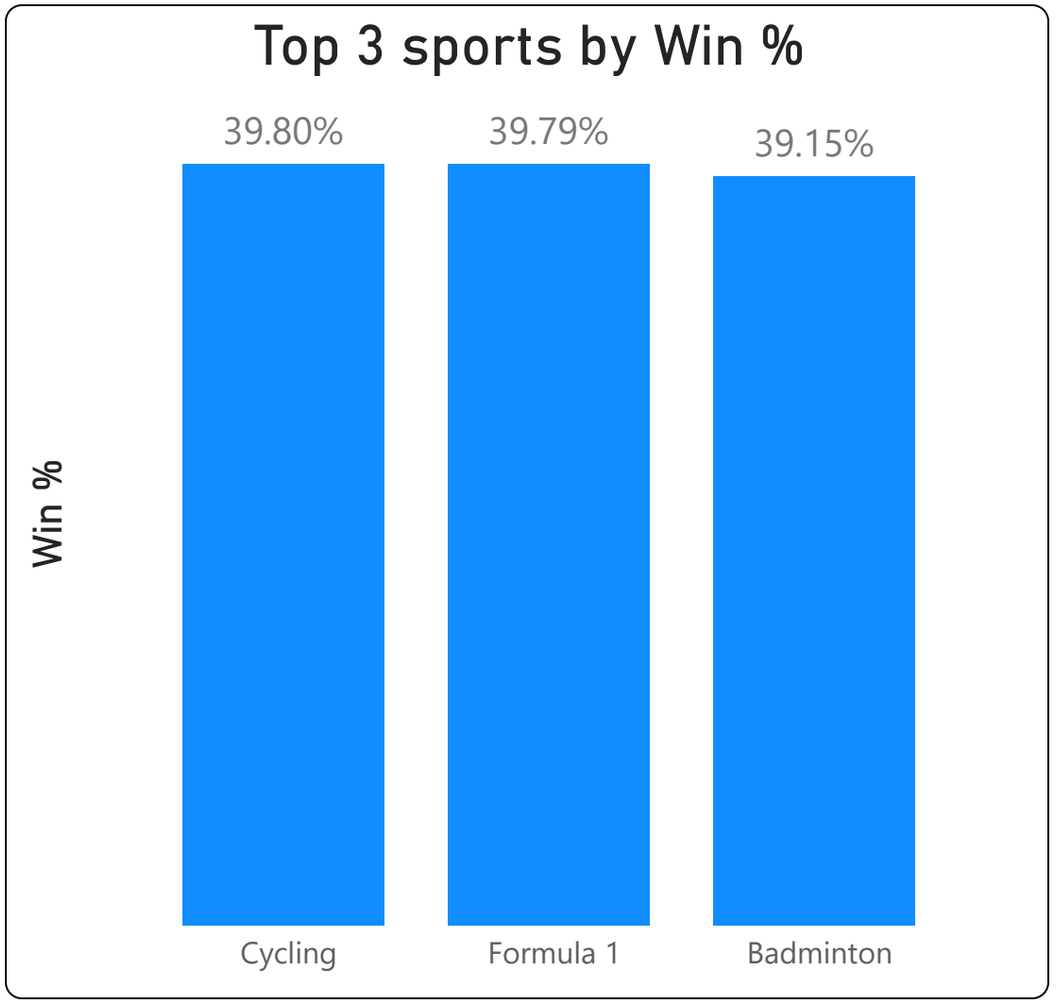


Amount of money bet is coherent with the most popular sports among our users

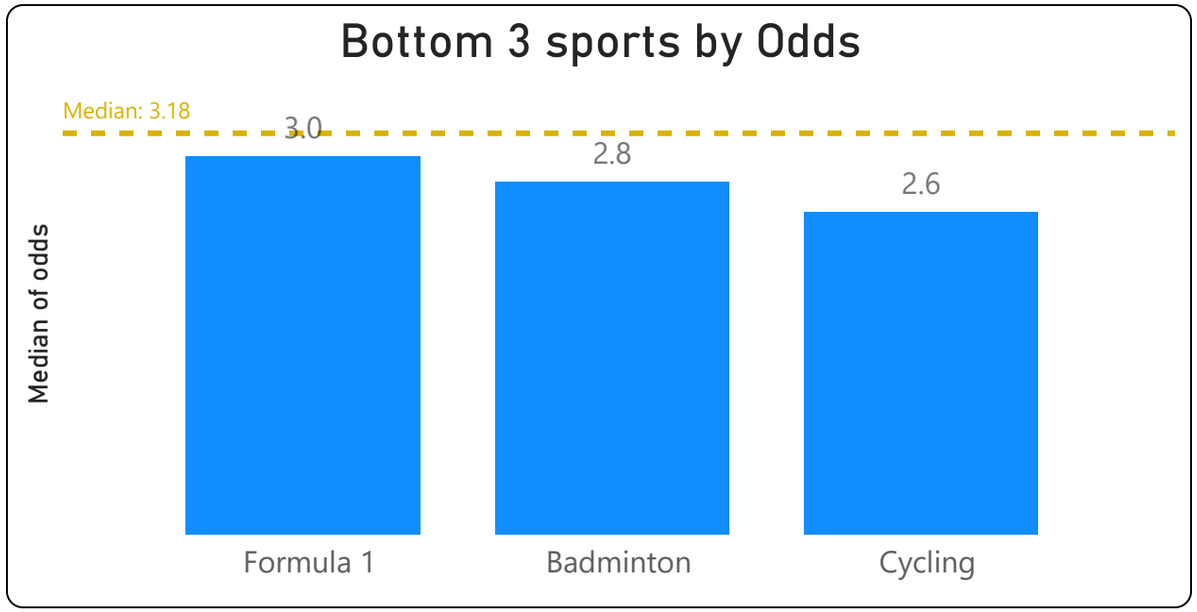


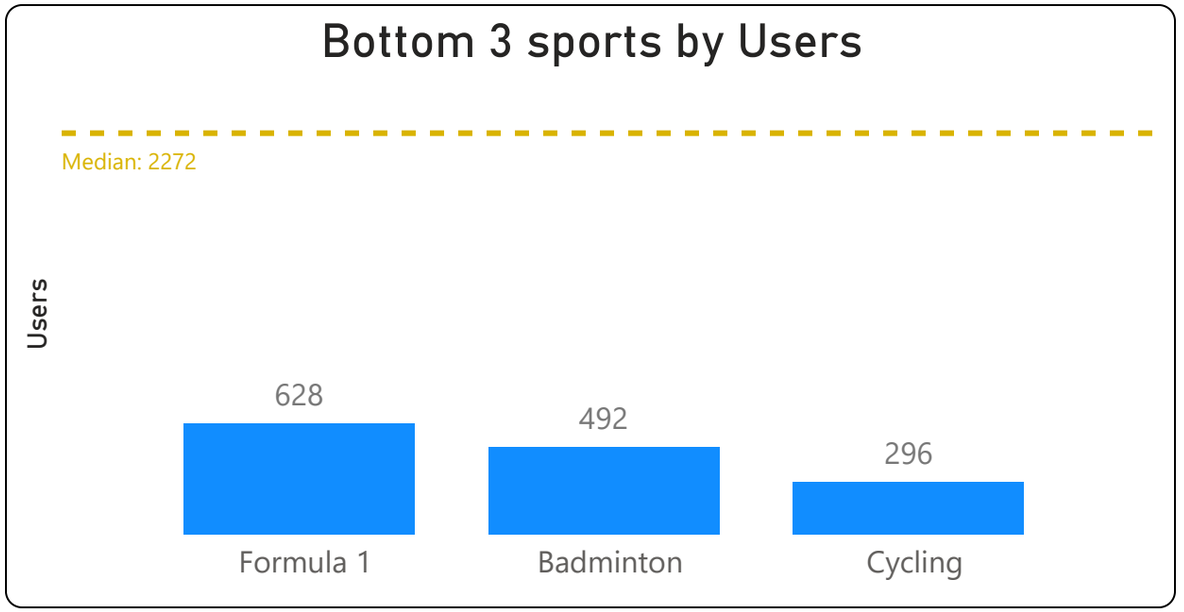
The 3 least profitable sports coincide with the 3 sports with the highest percentage of winning

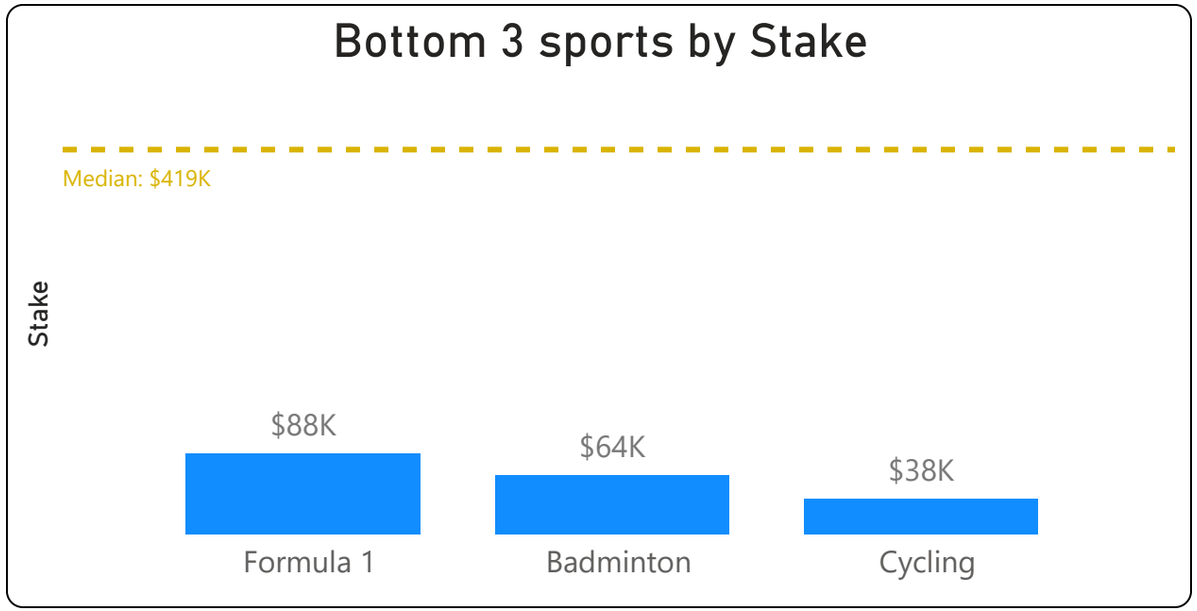


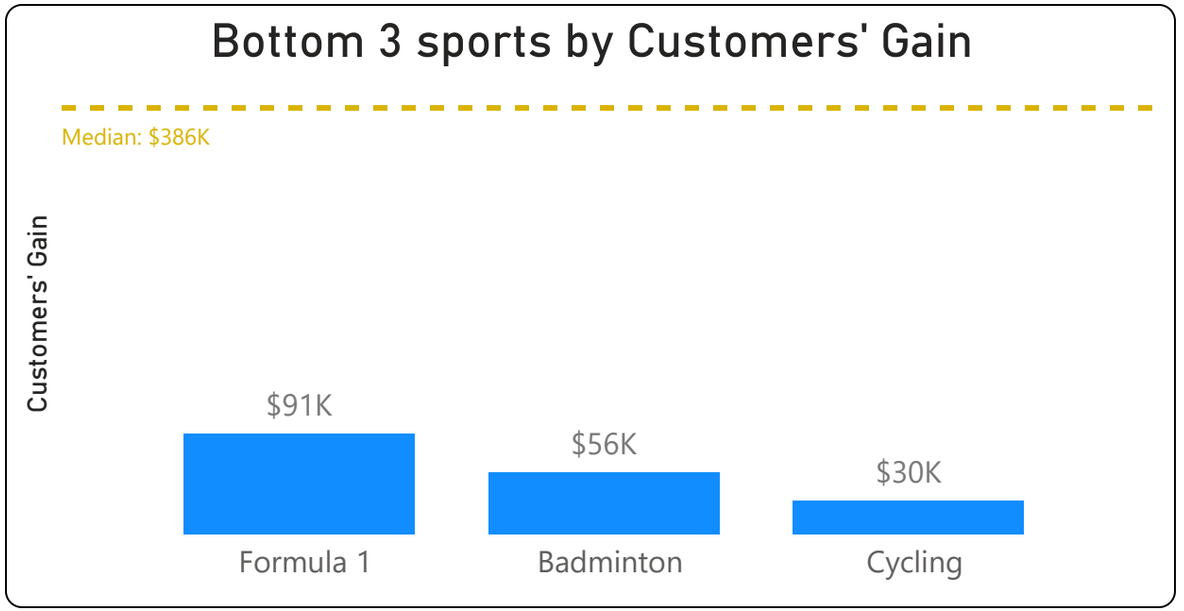


They are also the bottom 3 sports by Odds, Users, Stake, and Customers' Gain

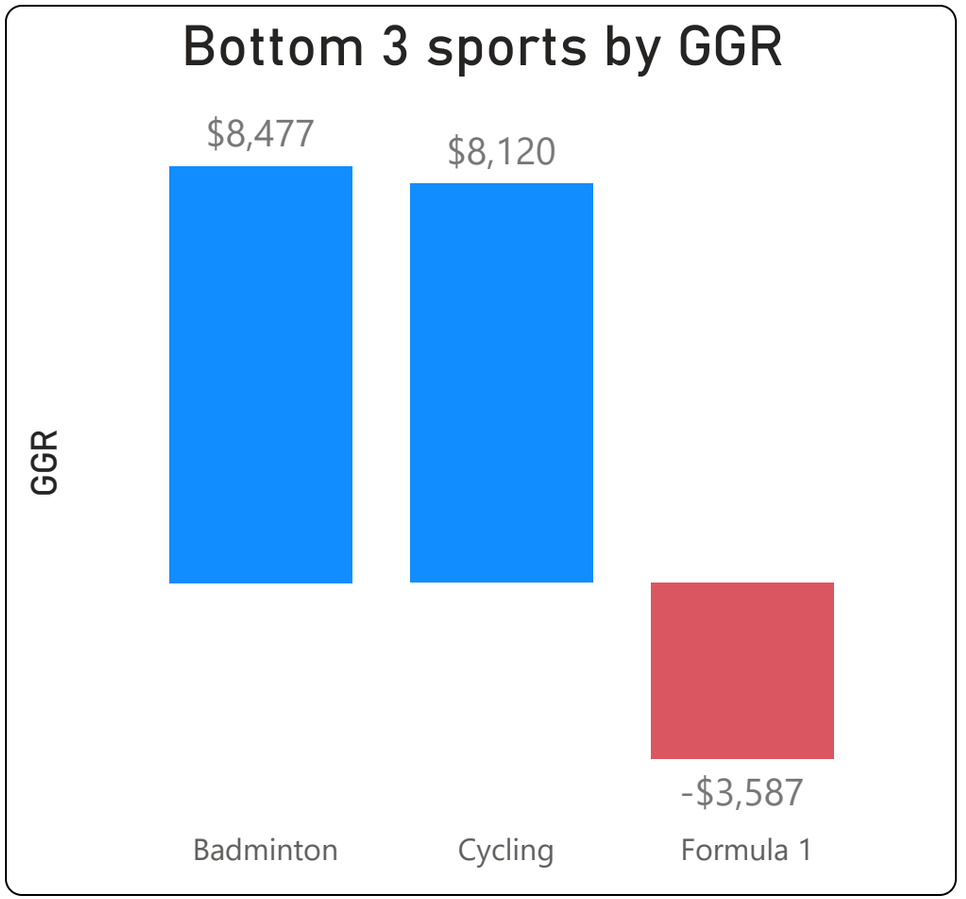


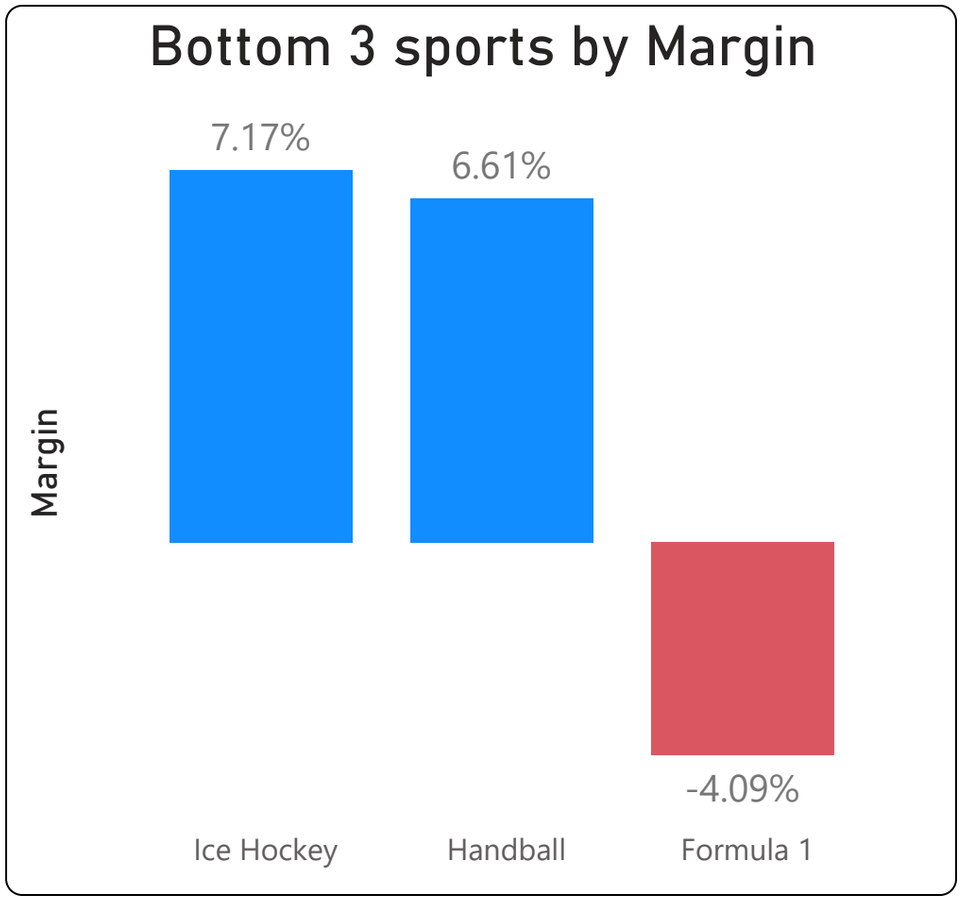






Only Formula 1's Profit has been negative

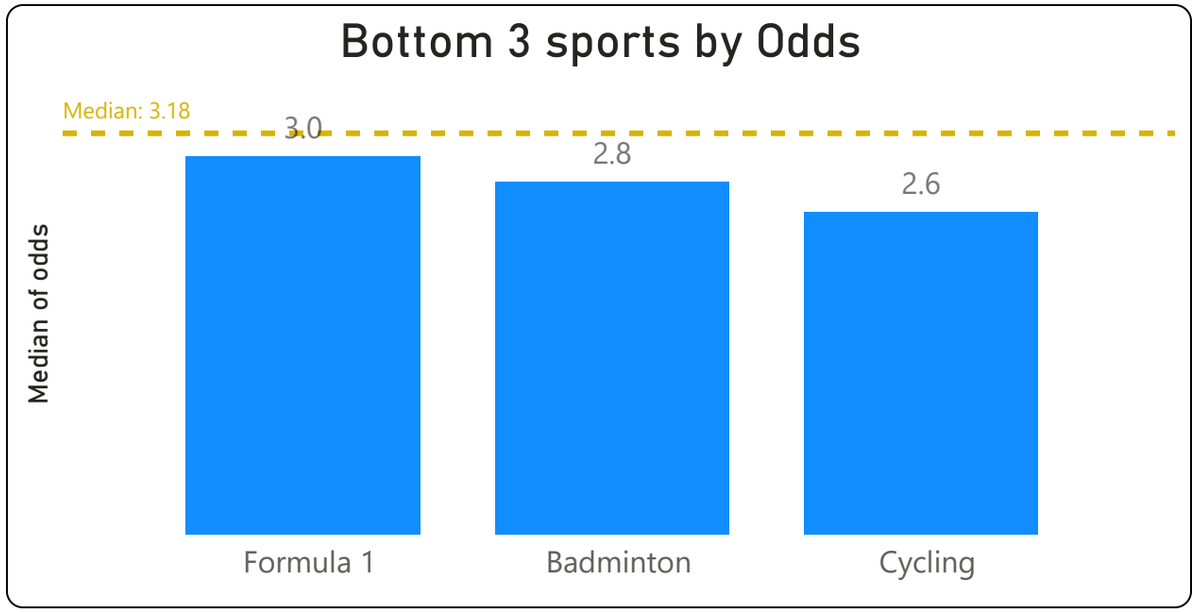


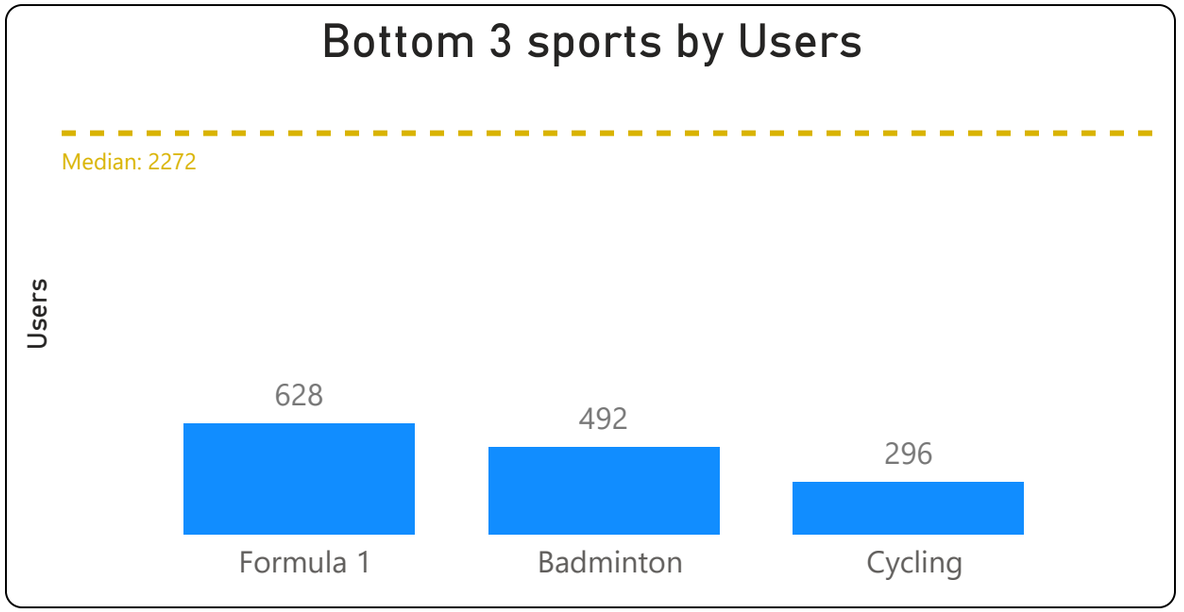


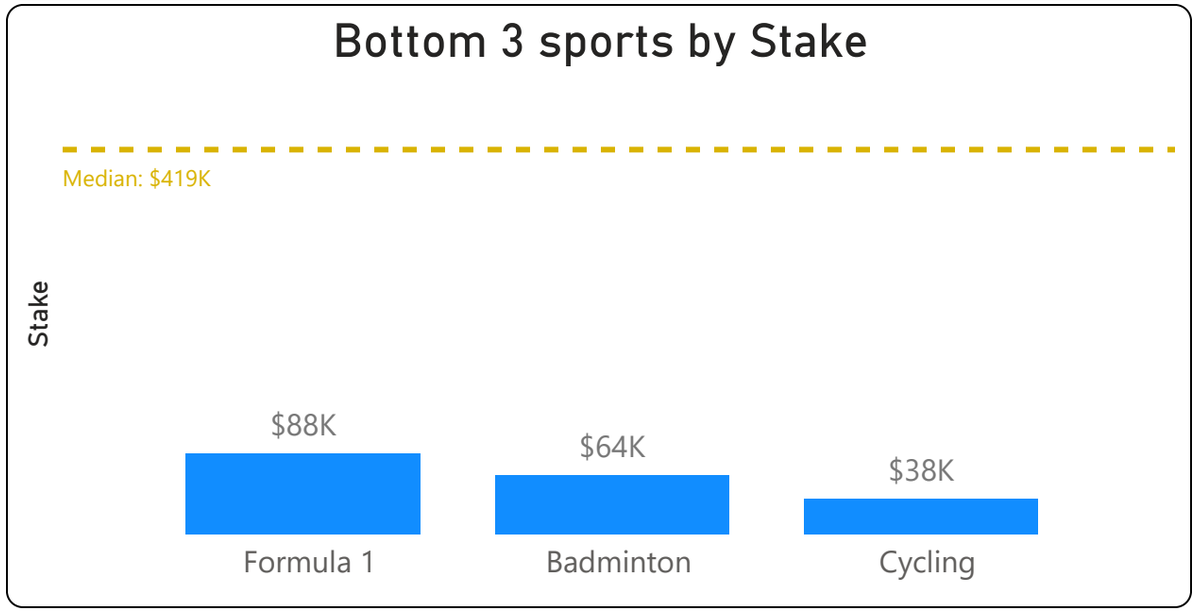
-$3.59K
F1's GGR

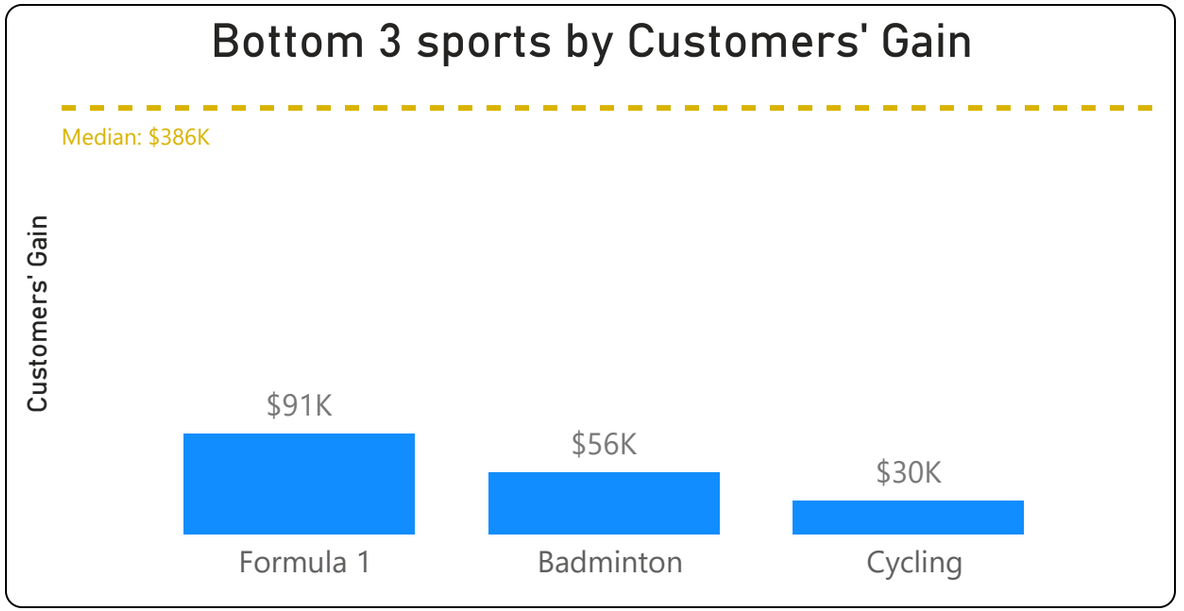
-4.09%
F1's Margin

Because Cycling and Badminton's Odds, Users, Stakes, and Customers' Gain are not as high as Formula 1's









Summary

Even though bettors who bet on Cycling, Badminton, and Formula 1 win more often than bettors who bet on other sports...

- They are few:

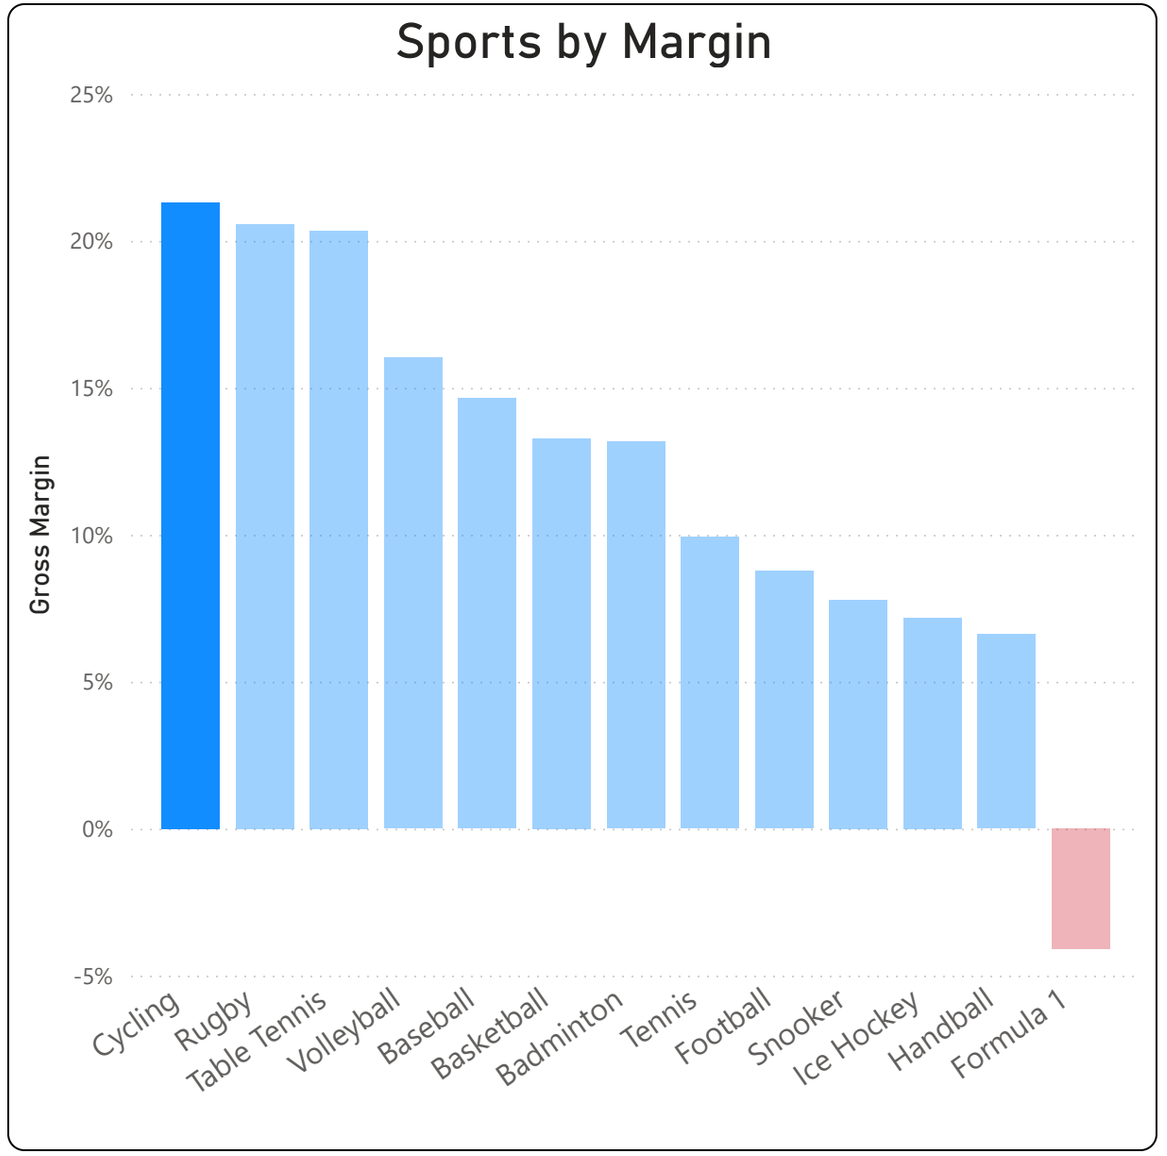
- So, when they loose, they don't loose much (our profit is not high)

- Due to low odds:

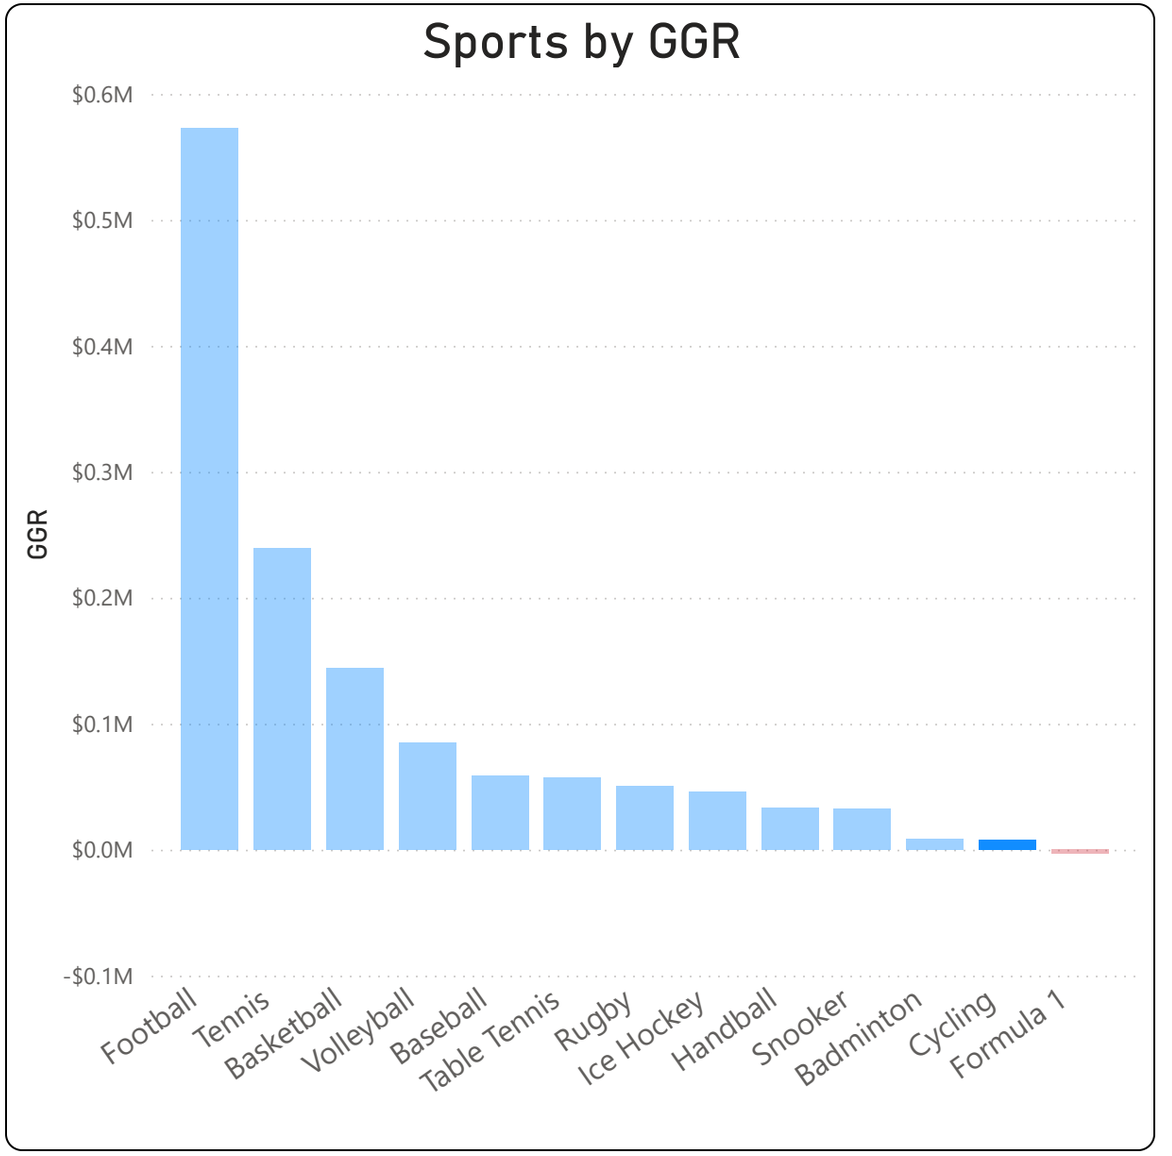
- When they win, they don't win much (we avoid net loss of money)

However, Formula 1's Odds, Users, and Stakes are high enough to make the Customers' Gain exceed the Stake and cause a loss of money

Cycling even has the highest Margin



But its low Odds and Stake make it the 2nd least profitable sport



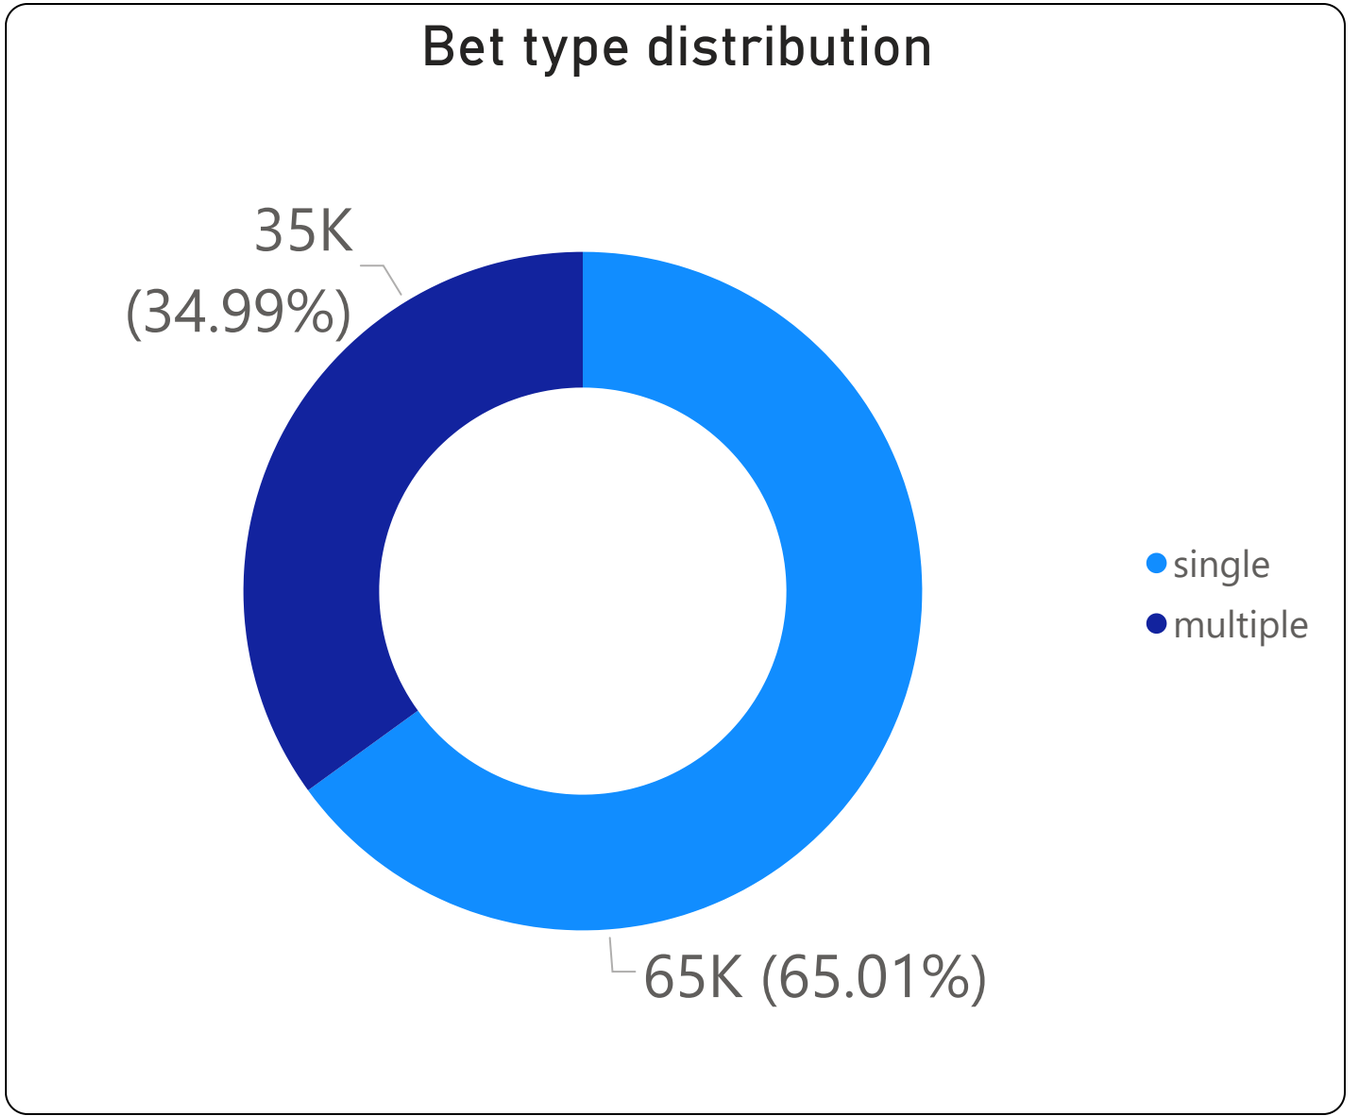
Advice

- Delete Formula 1 from the sportsbook or improve the effiency of its odds

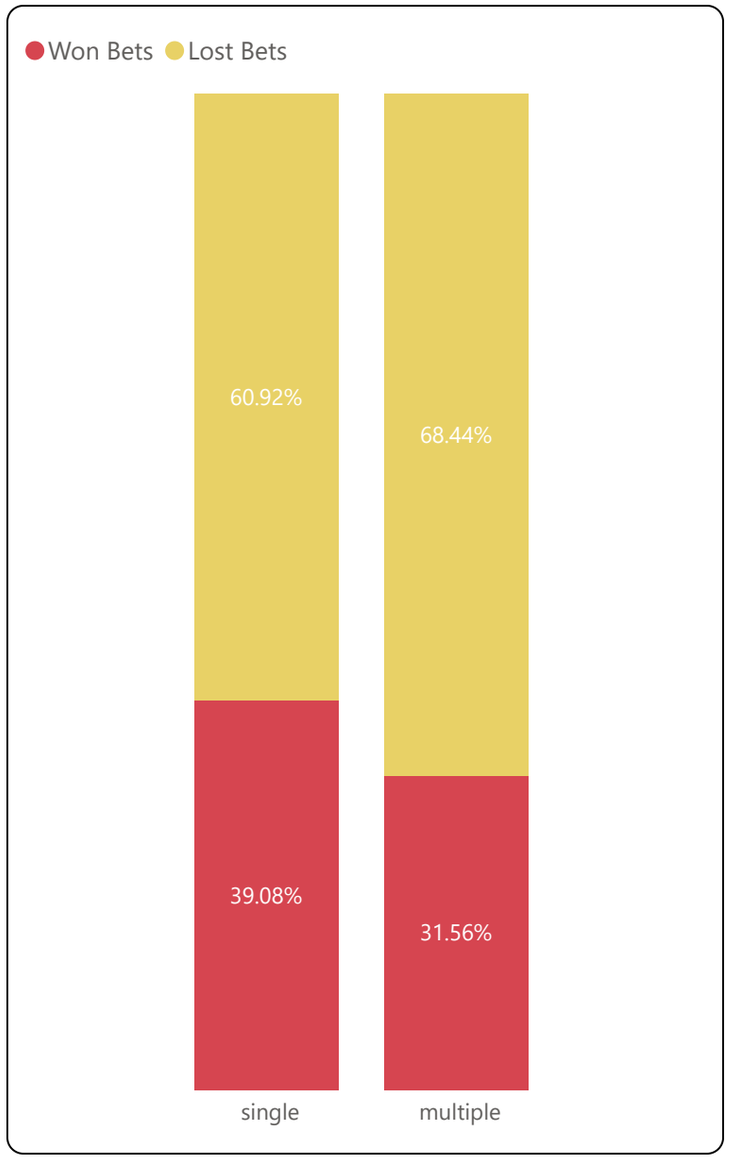
- Monitor Cycling and Badminton. Especially their odds efficiency.

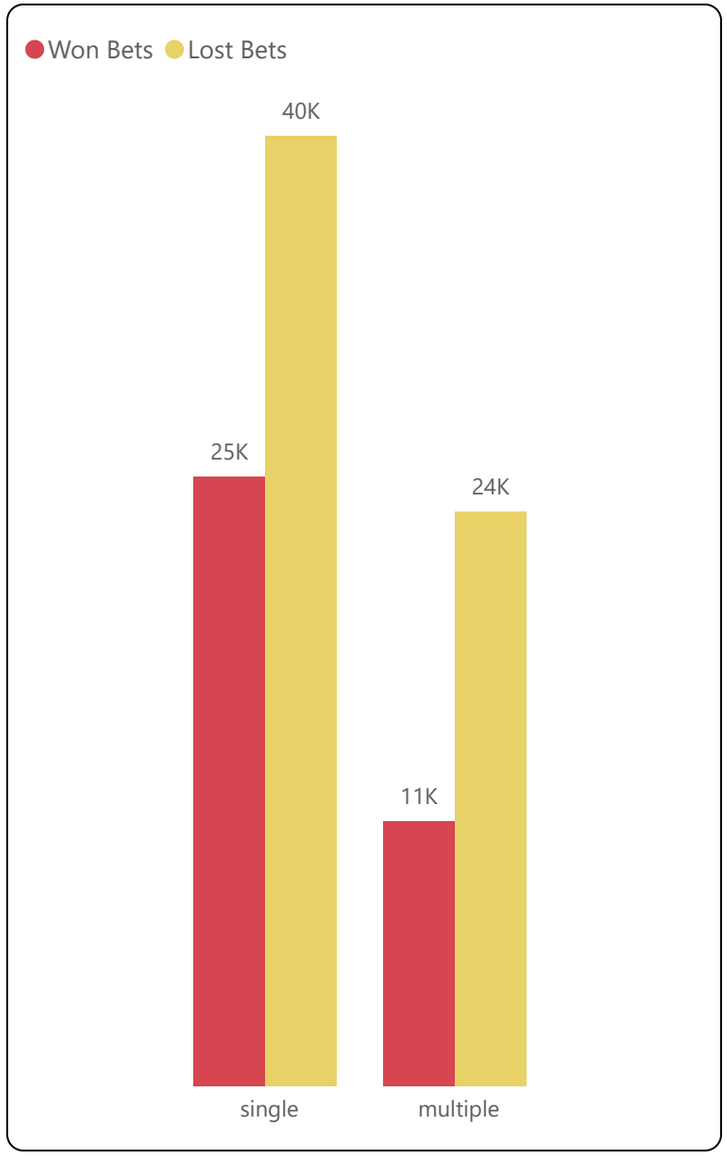
Bet Type Insights

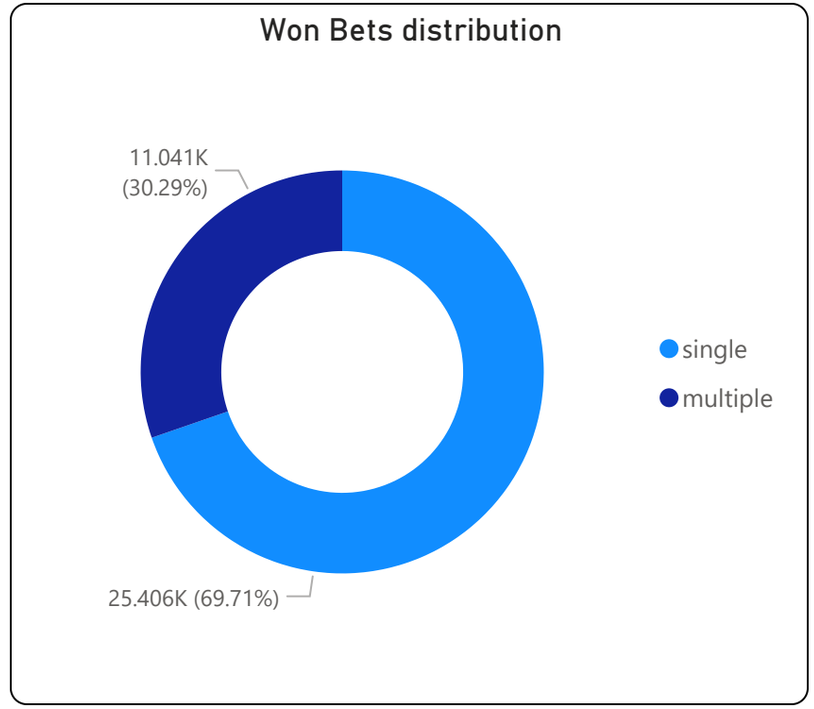
Our Users prefer single bets



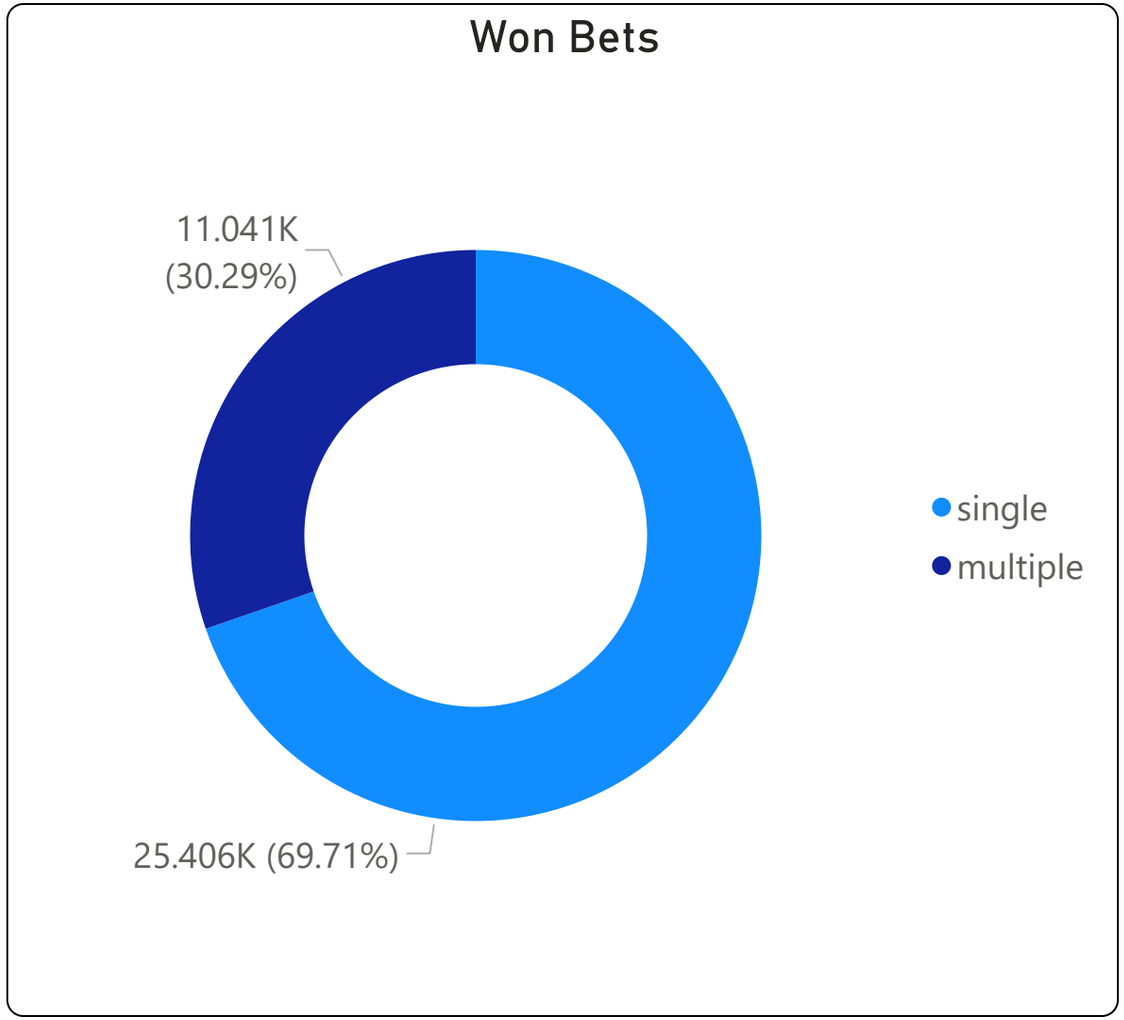
Single bets lead to higher Win % and more winnings than multiple bets

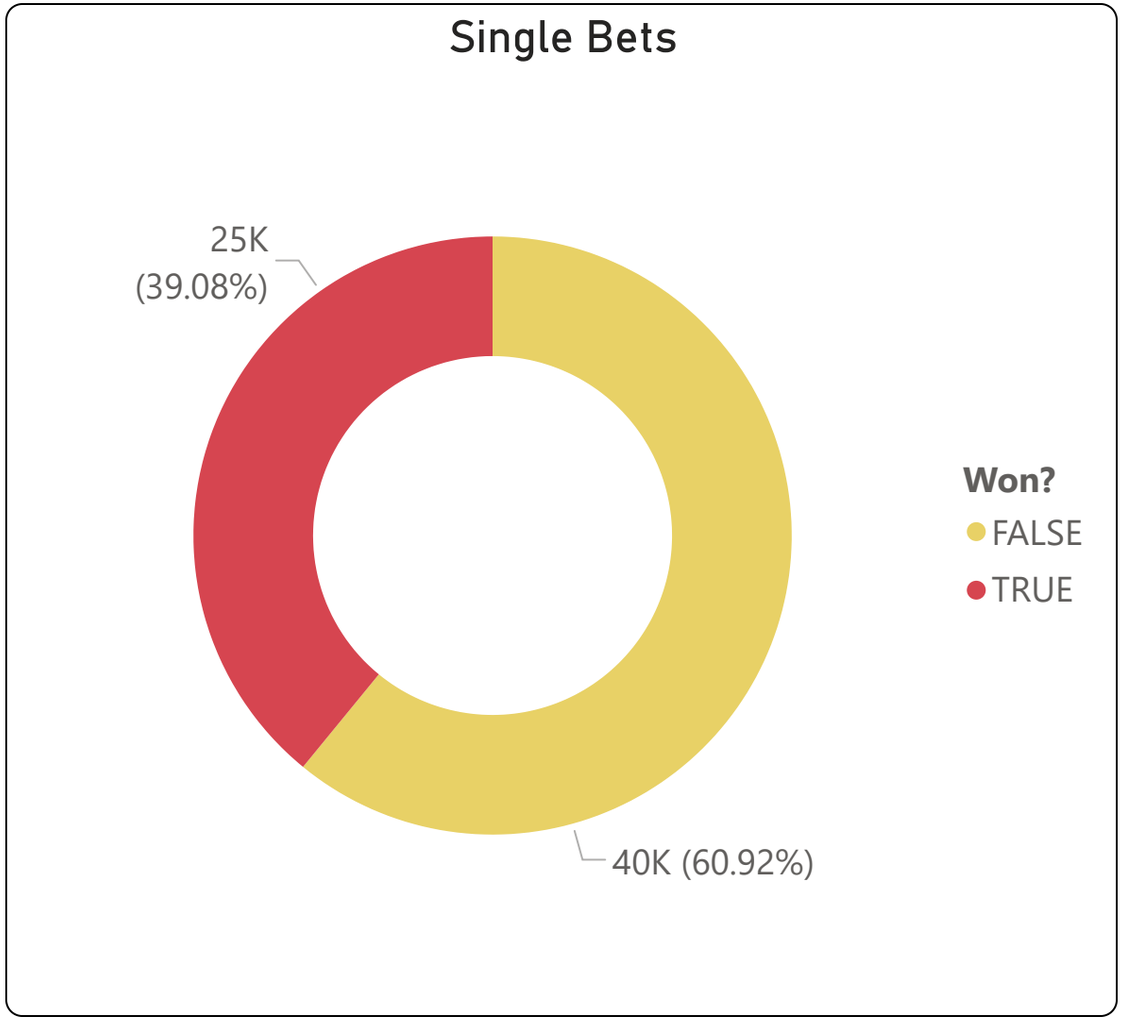




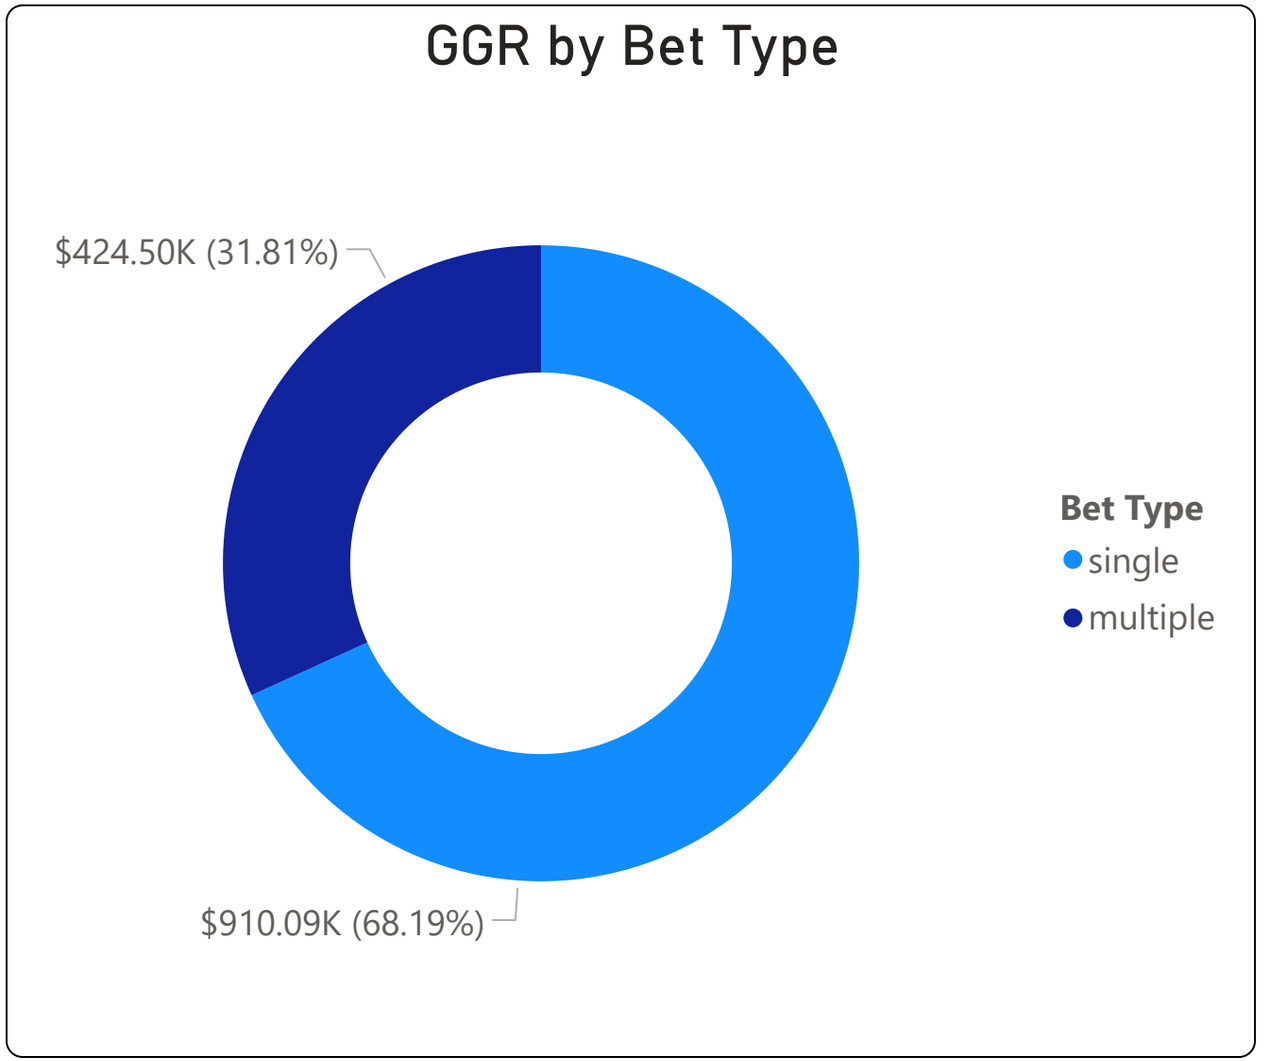


69 % of Won Bets are Single but only 39 % of Single Bets are won

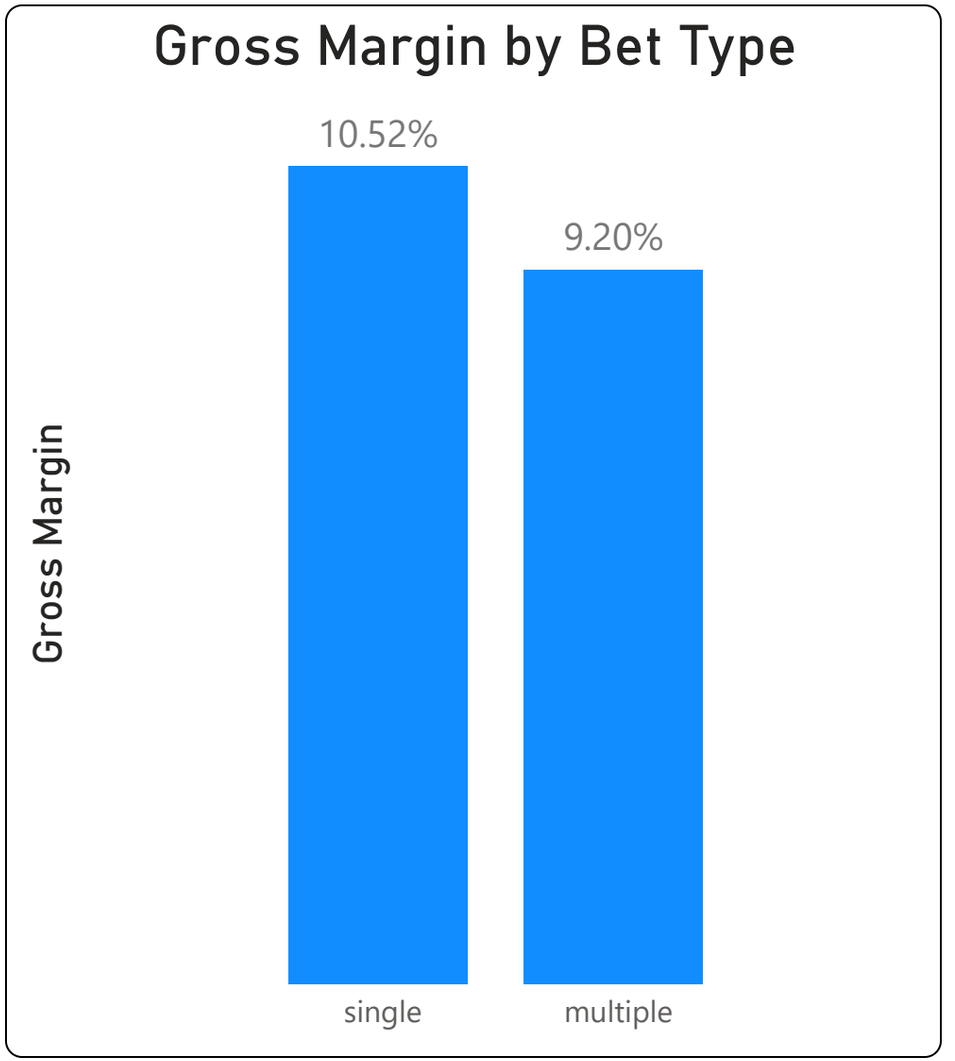




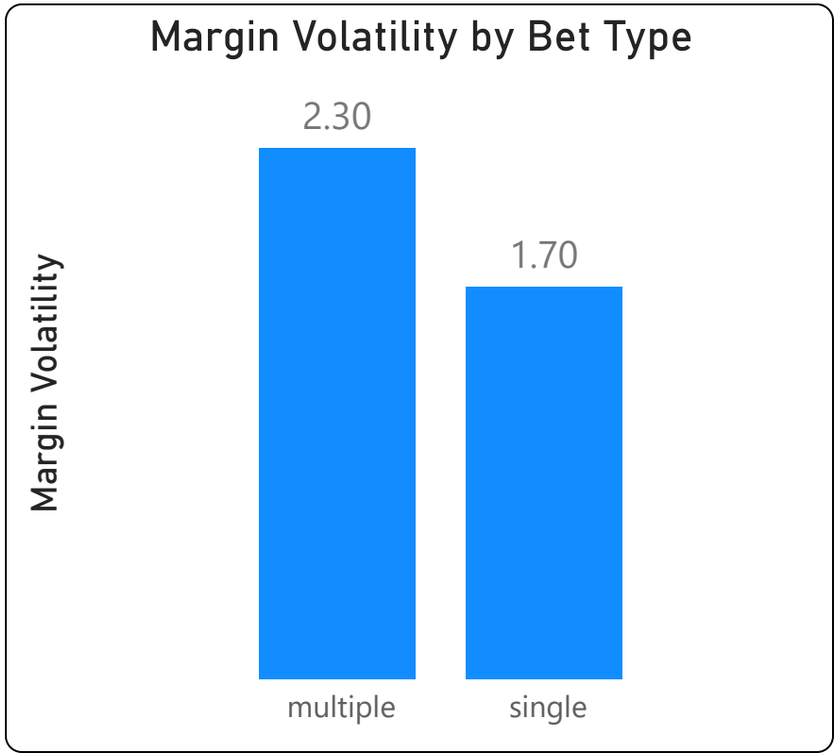
Single bets have been more profitable than multiple bets



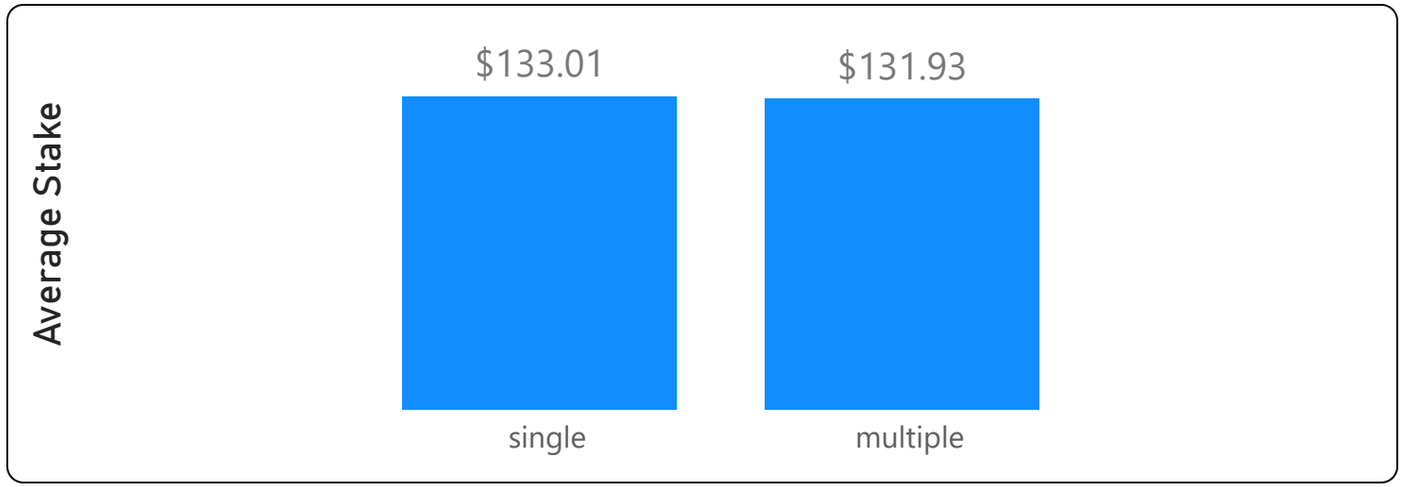
Single bets have produced higher Margin than multiple bets



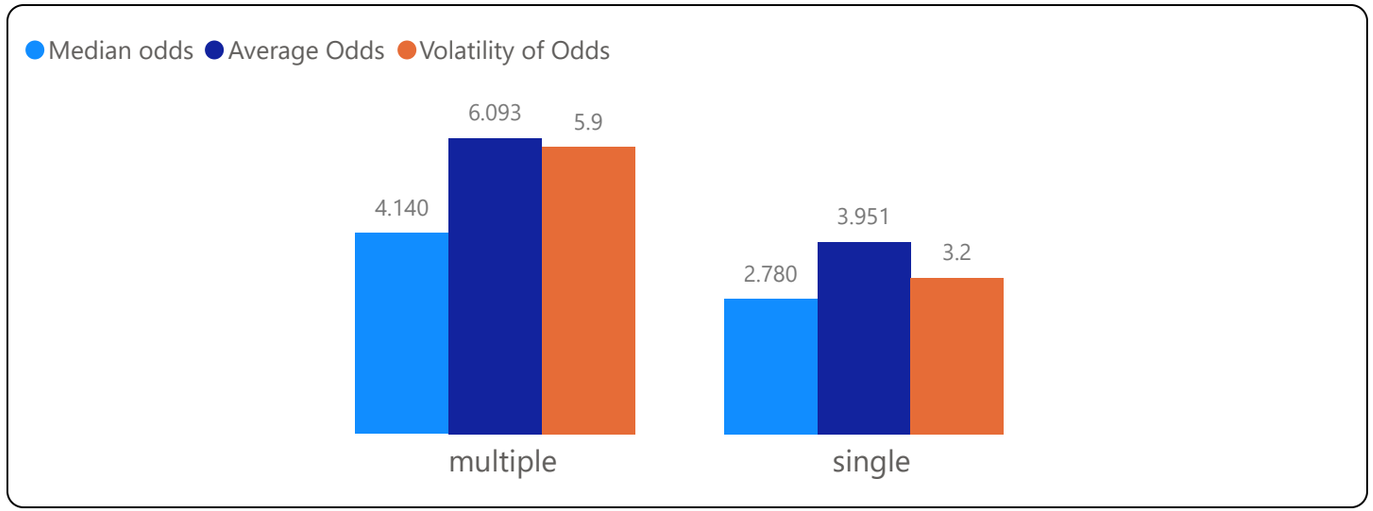
Single bets have produced less volatile margin



This is not due to differences in betting behaviour between the two types



But to lower and less volatile odds than multiple bets



Bet Type Insights Summary

65 % of Bets placed on our website are single

Even though single bets registered a slightly higher Win % than multiple ones ...
Single Bets have produced higher and less volatile Margin

Hence, Single Bets have proved better when it comes to Margin and stable Profit

Nevertheless, the performance of Multiple Bets is just slightly inferior than Single Bets' one (1.3 percenatage points difference of Margin and 8 percentage points difference of Win %).
This demonstrates the sportsbook performs well across bet types
